

OPERATE FROM ANYWHERE

With the convenience, confidence, and flexibility of remote battery-powered valve actuators.

Leave single-purpose field visits, costly line power installation, and unreliable communication behind. Remote valve actuators make valve control simpler, smarter, and more cost- and labor-efficient.

EASY REPLACEMENTS OR RETROFITS

The 3S Remote Actuator fits any valve with a 2-inch operating nut, streamlining a retrofit to an existing valve or installation with a new one.

FLEXIBLE APPLICATIONS

Remote operation supports a wide range of operations, including critical valve control, virtual district metering area creation, and rapid isolation in event of main breaks—reducing NRW losses.

SEAMLESS CONTROL

Smart Actuation solutions can integrate with your existing SCADA system or use a native cloud platform, customized to your requirements.
