

SEAWALL TILES

ENHANCE REEF ARCHES® PERFORMANCE

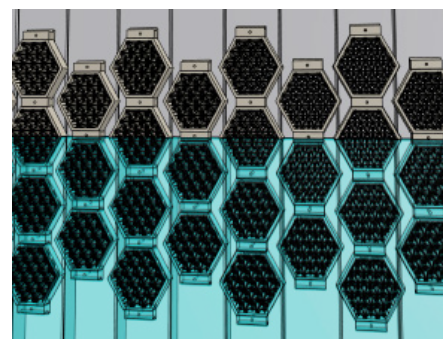

Seawall Tiles are a performance enhancing insert accessory for Reef Arches, designed to reduce wave energy by up to 70% while creating habitat for oysters, corals, and other marine life that support water quality and marine diversity.

CREATING A SUSTAINABLE HABITAT

Conventional seawalls protect coastlines, but they create challenges by reflecting wave, eroding the sea floor, and not providing habitat for sea life. Adding Reef Arch Seawall Tiles to structurally sound, existing seawalls solve these challenges by providing structure to dissipate wave energy, surface area for oysters, corals, and clams to attach, and places for fish and other small marine life to live. Easy to install, Reef Arch Seawall Tiles are the solution you need to bring to your waterfront oasis.

INSTALLATION

Seawall Tiles are a performance enhancing insert accessory for Reef Arches, designed to reduce wave energy by up to 70% while creating habitat for oysters, corals, and other marine life that support water quality and marine diversity.

TECHNICAL SPECIFICATIONS

Dimensions	24.25" x 23"
Surface Area	28 sq ft
Unit Weight	70 lbs
CSA Concrete	5000 psi
